Certified Enterprise Business Analyst

Certified Enterprise Business Analyst

CEBA curriculum is designed by Fhyzics Business Consultants with industry inputs to make it more practical for today's business analysts. The Business Analysts trained and certified in CEBA can confidently handle their day-to-day business analysis activities and deliver results.

CEBA program has thirteen modules and is delivered in 45 hours in a classroom or online or hybrid mode. The participants get three months of access to the Fhyzics Learning Management and Assessment System (LMAS). LMAS contains the classroom presentations, reading materials, reference articles, business analysis templates, and module quizzes. Upon completion of the training, whenever the participant is ready, they can appear for the CEBA examination within three months from the enrollment date. Candidates need to secure 70% and above to pass the CEBA examination.
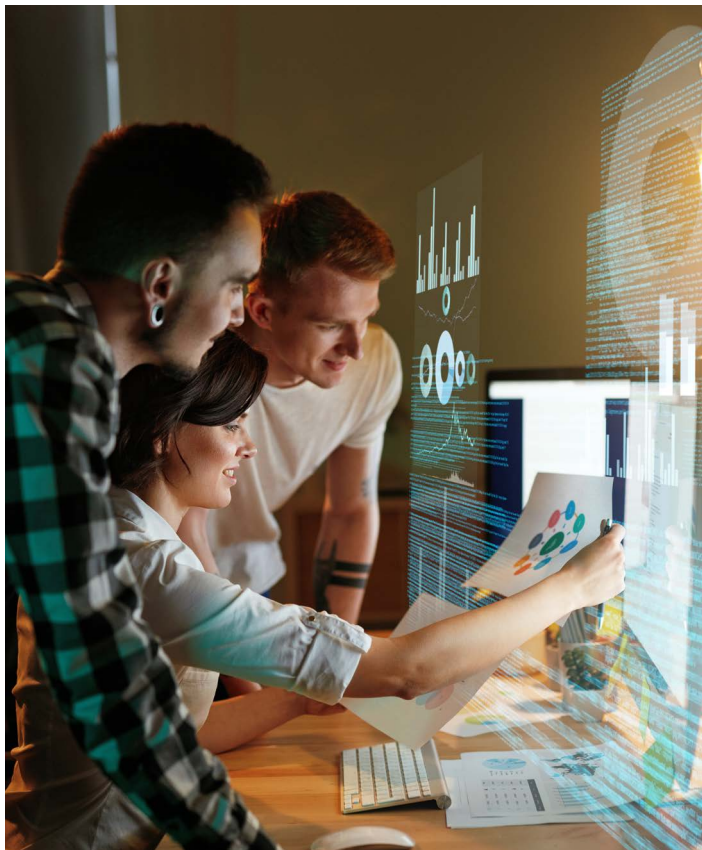

An organization is an amalgamation of people, processes, and system capabilities. In an organization, all these three capabilities need to work like an orchestra to deliver products or services to the customer. These products or services are capabilities the customer wants to solve their problems. In summary, an organization is a place where capabilities are assembled in such a way to deliver new capabilities to customers.

CEBA curriculum is designed to equip the business analysts to identify capability gaps and create new capabilities for the organization to transform it to the desired future state and ultimately attain the vision.

CEBA Examination

CEBA is an online, proctored examination consists of 150 Multiple Choice Questions (MCQs) to be answered in 3 hours. Participants need to secure 70% to be certified. Successful candidates will receive CEBA Certificate.
